

What is MuMETAL®?

MuMETAL®, Co-NETIC® AA and other shielding alloys, offer important electromagnetic field shielding characteristics, including very high magnetic permeability - its ability to absorb magnetic energy. The unique properties of this family of alloys results in the highest possible attenuation, making these shielding alloys the materials of choice for reducing low-frequency electromagnetic interference (EMI).

Conforms to 1J79, MIL-N-14411C Composition 1, and ASTM A-753 Alloy 4.
